Author Index to Volumes 131–138

Acharya, Raj, *See* Wasserman, Richard
Afenya, Evans, 138:79
Allen, Linda J. S., and Phyllis J. Cormier, 131:51
Anderson, Roy M., *See* Ferguson, Neil M.
Axelrod, David E., *See* Stivers, David N.

Bastin, G., *See* Chen, L.
Becker, Niels G., and Robert Hall, 132:205 and Vladimir Rouderfer, 131:81
Begum, S., *See* Bhattacharya, D. K.
Bell, Bradley M., 132:219
Bender, Martin H., 131:103
Bhattacharya, B. N., *See* Mukherjee, S.
Bhattacharya, D. K., and S. Begum, 135:111
Bos, Cees, *See* Hoofd, Louis
Brenner, David J., *See* Sachs, Rainer K.
Broom, M., C. Cannings, and G. T. Vickers, 136:21
Bull, J. J., *See* Levin, B. R.
Byrne, H. M., and M. A. J. Chaplain, 135:187 *See also* Pettet, G. J.

Cannings, C., *See* Broom, M.
Cantrell, R. S., C. Cosner, and V. Hutson, 136:65
Chang, Joseph T., 134:189; 137:51
Chaplain, M. A. J., *See* Byrne, H. M.
Chappell, Michael J., 133:1
Chen, L., and G. Bastin, 132:35
Chung, Shin-Ho, and Rodney A. Kennedy, 133:111
Clancy, Damian, 132:185
Claret, Laurent, and Athanassios Iliadis, 133:51
Clarke, P. G. H., *See* Jeanprêtre, N.
Cormier, Phyllis J., *See* Allen, Linda J. S.
Cosner, C., *See* Cantrell, R. S.
Cruywagen, Gerhard C., 134:85
Cushing, J. M., 137:135

Denes, Josef, and Daniel Krewski, 131:185
Dewanji, Anup, E. Georg Luebeck, and Suresh H. Moolgavkar, 135:55
Dimitrov, Dimiter S., *See* Spouge, John L.

Eisenfeld, J., 132:111
Engen, Steinar, and Russell Lande, 131:169

Ferguson, Neil M., D. James Nokes, and Roy M. Anderson, 138:101
Ferretti, Vincent, and David Sankoff, 134:71

Gabriel, J.-P., *See* Jeanprêtre, N.
Gibb, William J., Mary B. Wagner, and Michael D. Lesh, 137:101
Greenhalgh, David, 136:141
Grenfell, B. T., *See* White, K. A. J.
Gyllenberg, Mats, Ilkka Hanski, and Torsten Lindstrom, 134:119

Hanski, Ilkka, *See* Gyllenberg, Mats
Heidenreich, Wolfgang G., *See* Sachs, Rainer K.
Hendry, R. J., *See* White, K. A. J.
Hoffman, Julie, 136:109
Hoofd, Louis, Cees Bos, and Thom Oostendorp, 131:23
Hutson, V., *See* Cantrell, R. S

Iliadis, Athanassios, *See* Claret, Laurent

Jaffar, Sayed Murtaza, *See* Thomas, Diana Maria
Jeanprêtre, N., P. G. H. Clarke, and J.-P. Gabriel, 135:23

Kelly, Colleen, and John Rice, 133:85
Kennedy, Rodney A., *See* Chung, Shin-Ho
Kiffe, Thomas R., *See* Matis, James H.
Kimmel, Marek, *See* Stivers, David N.
Koh, D., J. Wei, and J. Wu, 131:135
Kopp-Schneider, Annette, *See* Portier, Christopher J.
Kretzschmar, Mirjam, and Martina Morris, 133:165
Krewski, Daniel, *See* Denes, Josef
Kuperman, Marcelo N., *See* Schat, Carlos L.
Kuznetsov, Yu. A., and S. Rinaldi, 134:1

ELSEVIER

Subject Index to Volumes 131–138

Acute leukemia and chemotherapy: a modeling viewpoint, 138:79
Adaptive optimization and the harvest of biological populations, 136:1
Age-structured models of the transmission of the measles virus, 138:101
Agonistic-antagonistic models: Letter to the Editor, 134:113; Reply, 134:117
Angiogenesis in soft tissue, wound-healing, a model of, 136:35
Axons dependent on a single trophic substance, competitive exclusion between, 135:23

Bell's model of delayed maturity, a counterintuitive result in, 131:103
Bionomic equilibrium of two-species system, 135:111
Bioprocess models, structural identifiability of the yield coefficients in, when the reaction rates are unknown, 132:35
Blood flow, effect on oxygen extraction pressures calculated in a model of pointlike erythrocyte sources for rat heart, 131:23
BOOK REVIEW: Cushing, J. M., Dynamic Energy Budgets in Biological Systems (S. A. L. M. Koojiman), 137:135
BOOK REVIEW: Spouge, John L., Information Theory and Molecular Biology (Hubert P. Yockey), 135:217
BOOK REVIEW: Webb, Glenn, Optimal Control of Drug Administration in Cancer Chemotherapy (Rory Martin and K. L. Teo), 132:217

Canonical ensemble, competition and, 133:69
Carcinogenesis, calculating tumor incidence rates in stochastic models of, 135:129
Carcinogenesis, radiation, a diversity of responses displayed by a stochastic model allowing for cell growth, 132:1
Carcinogenesis, stochastic simulation of a multistage model of, 134:35
Carcinogenesis with stochastic stem cell growth, an exact representation for the generating function for the Moolgavkar-Venzon-Knudson two-stage model of, 131:185
Cardiac activity, triggered, modeling: an analysis of the interactions between potassium blockade, rhythm pauses, and cellular coupling, 137:101
Cell and receptor density; effects of equilibrium binding of multivalent ligands to cells, 135:147
Cell number stochasticity, and dose timing in tumor radiotherapy, 138:131
Cell proliferation, a discrete-time, multitype generational inheritance branching process model of, 137:25
Cellular coupling, interactions between potassium blockade, rhythm pauses, and; modeling triggered cardiac activity, 137:101
Chemotherapy, acute leukemia and, 138:79
Clark model for stability of populations, an augmented, 131:157
Coexistence of multiple food chains in a heterogeneous environment: interactions among community structure, ecosystem functioning, and nutrient dynamics, 134:153
Compartmental models, undetermined, partial identification of: a method based on positive linear Lyapunov functions, 132:111

MATHEMATICAL BIOSCIENCES 138: 151–154

655 Avenue of the Americas, New York, NY 10010

0025-1066/96/$15.00
PII S0025-5564(96)00165-4

Compartment models, stochastic, with Prendville growth rates, 138:31
Competing species models, pioneer-climax, Hopf bifurcation in, 137:1
Competition and canonical ensemble, 133:69
Competitive coexistence, an exact analytical solution of a three-component model for, 131:205
Competitive exclusion between axons dependent on a single trophic substance: a mathematical analysis, 135:23
Concurrency in networks, measures of, and the spread of infectious disease, 133:165
Control problem in a polluted environment, 133:139

Delayed maturity, a counterintuitive result in Bell's model of, 131:103
Delayed recruitment model, a sex-structured, 134:85
Dissipativity of an N prey-one predator system, 131:173
Dose timing in tumor radiotherapy: considerations of cell number stochasticity, 138:131
Dynamical complexity in age-structured models of the transmission of the measles virus: epidemiological implications at high levels of vaccine uptake, 138:101

Environmentally driven epizootics, 131:51
Enzyme kinetics, classical, how to derive flux control coefficients from the rate equations of, 138:45
Epidemic, carrier-borne, models incorporating population mobility, 132:185
Epidemic models, collective, 134:51
Epidemics in a community of households made up of individuals of various types, immunization levels for preventing, 312:205
Epidemiological and evolutionary implications of the intrinsic rate of increase of HIV/AIDS, 132:69
Epidemiological implications of dynamical complexity in age-structured models of the transmission of the measles virus, 138:101
Epizootics, environmentally driven, 131:51
Equilibrium binding of multivalent ligands to cells: effects of cell and receptor density, 135:147
ERRATUM: Lumped-Density Population Models of Pioneer-Climax Type and Stability Analysis of Hopf Bifurcations [*Math. Biosci.* 135(1):1], 137:74
ESS patterns: adding pairs to an ESS, 136:21
Evolution with heterogeneous rates, a remarkable nonlinear invariant for, 134:71
Evolutionary stable strategies, 136: 21
Evolutionary tree topology reconstruction methods, inconsistency of, when substitution rates vary across characters, 134:189
Evolutionary trees, full reconstruction of Markov models on: identifiability and consistency, 137:51
Flow cytometry and data analysis: basic concepts and statistics, 136:109
Flux control coefficients, how to derive from the rate equations of classical enzyme kinetics, 138:45
Food chain dynamics, remarks on, 134:1
Food chains, coexistence of multiple, in a heterogeneous environment, 134:153

Generating function for the Moolgavkar-Venzon-Knudson two-stage model of carcinogenesis with stochastic stem cell growth, an exact representation for, 131:185
Generational inheritance branching process model of cell proliferation, a discrete-time, multi-type, 137:25
Growth rates, Prendville, stochastic compartment models with, 138:31

HIV/AIDS, intrinsic rate of increase of: epidemiological and evolutionary implications, 132:69
HIV/AIDS, the spread of, among intravenous drug users in shooting galleries, effects of heterogeneity on, 136:141

HIV-1 infection kinetics in tissue cultures, 138:1
Hopf bifurcation in pioneer-climax competing species models, 137:1
Hopf bifurcations, lumped-density population models of pioneer-climax type and, 134:1
Host-macroparasite dynamics, effect of seasonal host reproduction on, 137:79

Immunization levels for preventing epidemics in a community of households made up of individuals of various types, 312:205
Infectious disease, measures of concurrency in networks and the spread of, 133:165
Irradiated cells, queuing models of potentially lethal damage repair in, 135:85

Lyapunov functions, positive linear, a method based on, for partial identification of undetermined compartmental models, 132:111

Markov chain model, coupled: characterization of membrane channel currents with multiple conductance sublevels as partially coupled elementary pores, 133:111
Markov models on evolutionary trees, full reconstruction of: identifiability and consistency, 137:51
Measles and rubella, simultaneous control of, by multidose vaccination schedules, 131:81
Measles virus, dynamical complexity in age-structured models of the transmission of, 138:101
Membrane channel currents with multiple conductance sublevels, characterization as partially coupled elementary pores; coupled Markov chain model, 133:111
Moolgavkar-Venzon-Knudson two-stage model of carcinogenesis with stochastic stem cell growth, generating function, 131:185
Multivalent ligands, equilibrium binding to cells: effects of cell and receptor density, 135:147

N prey-one predator system, remark on the dissipativity of, 131:173
Networks, sparse catalytic, permanence of, 131:111
Neurite growth and neuronal morphogenesis, a model for, 132:97
Neuronal morphogenesis, a model for neurite growth and, 132:97
Nonparametric density estimation applied to population pharmacokinetics, 133:51
Nucleotide evolution, modeling: a heterogeneous rate analysis, 133:85

Partial selfing, the effective population size for polyploids reproducing by, 135:69
Partially inbreeding finite populations, on the theory of. IV. The effective population size for polyploids reproducing by partial selfing, 135:69
Pharmacokinetics, a stochastic model for circulatory transport in, 132:141
Pharmacokinetics, population, nonparametric density estimation applied to, 133:51
Phyllotaxis, creating: the stack-and-drag model, 133:21
Pointlike erythrocyte sources, model of, the effect of blood flow on oxygen extraction pressures calculated in, 131:23
Polluted environment, a control problem in a, 133:139
Population dynamics models generating the lognormal species abundance distribution, 132:169
Population dynamics of a species colonizing an island, spatially explicit models for, 136:65
Population mobility, carrier-borne epidemic models incorporating, 132:185
Population model, stochastic, convergence of mean and variance of size for a, 138:23
Population models, lumped-density, of pioneer-climax type and stability analysis of Hopf bifurcations, 134:1
Population size, effective, for polyploids reproducing by partial selfing, 135:69
Populations, biological, adaptive optimization and the harvest of, 136:1

Predator-prey communities over a patchy environment, spatially heterogeneous discrete waves in, 131:135
Predator-prey model with optimal suppression of reproduction in the prey, 134:119
Premalignant foci of arbitrary shape, a biologically based model for the analysis of, 135:55

Queuing models of potentially lethal damage repair in irradiated cells, 135:85

Radiation carcinogenesis, a diversity of responses displayed by a stochastic model of, allowing for cell growth, 132:1
Reproduction in the prey, a predator-prey model with optimal suppression of, 134:119

Saturable binding, structural identifiability of models characterizing: comparison of pseudo-steady-state and non-pseudo-steady-state model formulations, 133:1
Sex-structured delayed recruitment model, 134:85
Social customs regulating physical separation and coital frequency, distribution of time of first birth in presence of, 131:1
SOFTWARE REVIEW: Bell, Bradley M., MLAB for DOS and MAC (Civilized Software, Inc.), 132:219
Sparse catalytic networks, permanence of, 131:111
Spatially heterogeneous discrete waves in predator-prey communities over a patchy environment, 131:135
Species abundance distribution, lognormal, population dynamics models generating, 132:169
Stability analysis of Hopf bifurcations, lumped-density population models of pioneer-climax type and, 134:1
Stability of populations, an augmented Clark model for, 131:157
Stack-and-drag model for creating phyllotaxis, 133:21
Stationary hybrid process involving a time series and a point process, estimation of certain parameters of a, 133:197
Stochastic compartment models with Prendville growth rates, 138:31
Stochastic model for circulatory transport in pharmacokinetics, 132:141
Stochastic population model, convergence of mean and variance of size for a, 138:23
Stochastic simulation of a multistage model of carcinogenesis, 134:35
Structural identifiability of models characterizing saturable binding: comparison of pseudo-steady-state and non-pseudo-steady-state model formulations, 133:1
Structural identifiability of the yield coefficients in bioprocess models when the reaction rates are unknown, 132:35

Time of first birth, distribution of, in presence of social customs regulating physical separation and coital frequency, 131:1
Topology, evolutionary tree, inconsistency of reconstruction methods when substitution rates vary across characters, 134:189
Tumor incidence rates in stochastic models of carcinogenesis, 135:129
Tumor model, in vivo, a patient-specific, 136:111
Tumor radiotherapy, dose timing in, 138:131
Tumors, necrotic, growth of, in the presence and absence of inhibitors, 135:187
Two-species system, bionomic equilibrium of, 135:111

Vaccination schedules, multidose, simultaneous control of measles and rubella by, 131:81

Wound-healing angiogenesis in soft tissue, a model of, 136:35
